

JAMBORYDE TRAVEL

Website Project — Team Draft

Draft prepared for internal team review · 17 July 2026

1. Overview

Jamboryde Travel is a car hire, airport transfer, and corporate transport business operating in and around Nairobi. Their brand promise — "Your Journey, Our Priority" — centres on reliability, safety, professional drivers, punctuality, and comfort. The business currently takes bookings through WhatsApp and phone calls, with no website.

This document is a working draft for the team to review, challenge, and build on before we lock the scope and start design/build work. It translates the initial brand poster and business notes into a concrete plan: who we're building for, what the site needs to do, how it should be structured, and what we still need from the client.

The platform has two sides: a client-facing website (browsing, quotes, bookings) and an admin dashboard the Jamboryde team uses to run day-to-day operations — bookings, fleet, drivers, pricing, and content. Section 10 covers the admin side in detail.

2. Target Customers

The site needs to speak to several distinct groups, each with different needs:

- Individual travellers — airport pickup/dropoff, simple and fast booking
- Families — larger vehicles, comfortable transfers
- Business travellers — professional drivers, reliable timing, executive vehicles
- Tourists — airport pickup, hotel transfers, day hire, intercity travel
- Companies — staff transport, VIP pickup, airport logistics, recurring contracts

Corporate accounts (monthly contracts, VIP clients, event logistics) are a strong potential revenue stream and should have a clear path on the site, separate from one-off individual bookings.

3. Core Services

Services should be broken into their own pages rather than one long list, so each can be found via search and speak directly to that customer's need.

Airport Transfers

- JKIA pickup & dropoff
- Meet & greet service
- Flight tracking (auto-adjust for delays)

Car Hire

- Chauffeur-driven hire
- Self-drive (if the client offers it — needs confirmation)

- Executive hire

City Transfers

- Nairobi CBD, Westlands, Karen, Kilimani, Gigiri, and other key areas

Intercity Transfers

- Nairobi → Naivasha
- Nairobi → Nakuru
- Nairobi → Kisumu
- Nairobi → Mombasa

Corporate Transport

- Monthly contracts
- VIP client transport
- Event logistics

Group Transfers

- Churches, schools, tour groups, events

4. Open Questions for the Client

Before we finalise design and content, we need the client to fill these gaps — the current brand poster doesn't cover them:

- Pricing — flat rates for common routes (e.g. JKIA → Westlands, JKIA → Karen, Nairobi → Naivasha) and hourly hire rates
- Full fleet list — beyond the Toyota Prado and luxury van (Alphard/Vellfire), what else do they run? Passenger and luggage capacity per vehicle?
- Coverage area — Nairobi only, or nationwide?
- Payment methods they want supported (M-Pesa, card, cash on arrival, invoicing for corporate clients)
- Do they currently have Google reviews or testimonials we can use at launch?
- Do they want instant online booking at launch, or a quote-request form that a human confirms (simpler, faster to ship)?

5. Website Goals

- Build trust immediately — people are trusting a stranger with their family, luggage, and schedule
- Generate bookings — every page should lead toward a clear "Book Now" action
- Reduce repetitive WhatsApp questions — pricing and routes should be visible without asking
- Improve Google visibility for searches like "airport transfer Nairobi", "JKIA transfer", "car hire Nairobi", "executive transport Nairobi"

6. Proposed Site Structure (Client-Facing)

Page	Contents
Home	Hero, services overview, fleet preview, why choose us, how it works, testimonials, CTA
About	Company story, mission, values, driver standards, safety standards
Services	Overview page linking to: Airport Transfers, Car Hire, Corporate Transport, Group Transfers, City Transfers, Intercity Transfers
Fleet	Vehicle cards — images, passenger/luggage capacity, features, book button
Pricing	Popular routes, airport rates, hourly rates, custom quotation form
Book Online	Booking form: service, vehicle, pickup, destination, date/time, passengers, flight number, notes
Testimonials	Google reviews and customer stories
FAQs	Flight delays, cancellations, payments, waiting time, booking process
Contact	Phone, WhatsApp, email, Google Maps, operating hours

7. Launch Features

Beyond a plain "Call Us" site, these are the features that make the difference for this kind of business:

- Instant quote calculator for common routes
- WhatsApp chat button
- Online booking form (quote-request at MVP; instant booking as a fast-follow)
- Flight tracking integration
- Automated email/SMS booking confirmation with a booking reference
- Driver details shared with the customer before pickup
- Secure online payments (fast-follow, not required for MVP)

8. Design Direction

The client's existing brand poster already sets the visual identity — we should carry it through consistently rather than introduce a new palette.

- Primary colour: dark navy — professionalism, luxury, trust
- Accent colour: orange — energy, travel, action (used for CTAs)
- Supporting colour: white — clean, modern, readable
- Style: minimal, premium, spacious, large photography, rounded cards, soft shadows
- Imagery: high-quality vehicle photography, airport and travel scenes

9. Suggested Build Approach

Recommend a mobile-first build, since most bookings will start from someone searching on their phone — often while travelling. Suggested phasing:

Phase 1 — MVP

- Client site: Home, About, Services, Fleet, Pricing (static routes), Contact, FAQs
- Quote-request form (routes to WhatsApp/email, no online payment yet)
- Admin: Bookings, Fleet, and Pricing management (see Section 10)
- SEO basics — page titles, meta descriptions, structured data for local business

Phase 2 — Booking & Automation

- Client site: full online booking flow with date/time/vehicle selection
- Admin: driver assignment, automated confirmation emails, flight tracking integration
- Admin: customer records and communication log

Phase 3 — Scale

- Client site: customer accounts with booking history, online payments (M-Pesa, card)
- Admin: roles & permissions, reports & analytics, driver portal / dispatch
- Admin: corporate invoicing, promo codes, activity log

10. Admin Dashboard & Controls

The admin dashboard is a separate, login-protected side of the platform for the Jamboryde team — not visible to customers. It's where staff manage every booking, vehicle, driver, and rate without touching code. Suggested modules:

Bookings Management

- View all bookings (upcoming, in-progress, completed, cancelled) with search and filters
- Assign a driver and vehicle to each booking
- Edit booking details, change status, add internal notes
- Manual booking entry for phone/WhatsApp requests
- Automated flight-delay alerts tied to a booking

Fleet Management

- Add, edit, or retire vehicles — photos, capacity, features, category
- Set vehicle availability/maintenance status
- Link vehicles to bookings and drivers

Driver Management

- Driver profiles — contact info, licence details, photo, vehicle assignment
- Availability and shift scheduling
- Driver performance / trip history

Customer Management

- Customer records and booking history
- Corporate account profiles with contract terms and invoicing details
- Notes and communication log per customer

Pricing & Routes

- Edit rates for standard routes and hourly hire without a developer
- Add/remove routes, set seasonal or peak pricing
- Manage promo codes and corporate discount rates

Content Management

- Edit website copy, testimonials, and FAQs
- Upload/replace fleet and site photography
- Manage announcements or service alerts shown on the site

Reports & Analytics

- Bookings by route, vehicle, and time period
- Revenue tracking and outstanding invoices
- Vehicle utilisation and driver activity

Users, Roles & Permissions

- Role-based access — e.g. super admin, dispatcher, finance, read-only
- Activity log of who changed what and when

Notifications

- Automated alerts to staff for new bookings, cancellations, and flight delays
- Automated customer-facing confirmation and reminder messages

Recommended sequencing: ship Bookings, Fleet, and Pricing management first since they unblock daily operations; Reports, Roles, and advanced Notifications can follow once the core dashboard is in use.

11. Next Steps

- Send the open questions in Section 4 to the client
- Confirm team roles and timeline for Phase 1
- Agree on tech stack for the build, including the admin dashboard
- Collect brand assets — logo files, fonts, existing photography
- Draft wireframes for Home, Services, Fleet, and Booking, and for the admin dashboard's core screens
